SUMMARY

Product Designer and Software Engineering undergraduate with experience in UX research, interaction design, high-fidelity UI, prototyping, accessibility, design systems, and frontend development. Skilled in translating user needs and research insights into clear user flows, responsive interfaces, and implementation-ready design solutions, with a strong understanding of React and frontend development that supports effective collaboration with engineering teams. Brings additional strength in branding and visual systems to create cohesive, user-centered digital products.

WORK EXPERIENCE

Trainee Software Developer

DDS Techvira | Feb 2026 – Aug 2026

- Design modern, user-friendly interfaces in Figma and translate approved designs into responsive React.js applications with close attention to usability and visual consistency.
 - Create reusable UI components and responsive layouts that maintain consistent interaction patterns across desktop, tablet, and mobile experiences.
 - Improve usability by refining navigation, spacing, visual hierarchy, interaction patterns, and responsive behaviour based on product requirements and feedback.
 - Identify and resolve UI bugs, layout inconsistencies, responsiveness issues, and cross-browser problems while reviewing implemented screens against design specifications.
 - Collaborate with designers and backend developers using Git and Agile workflows to support smooth design handoff, implementation, testing, and iterative product improvements.
-

SKILLS SUMMARY

- Product Design: Product Strategy, User-Centered Design, Problem Definition, Feature Prioritization, Information Architecture, User Flows, Interaction Design, Prototyping, Usability Testing
 - UX Research: User Interviews, Competitive Analysis, Research Synthesis, Affinity Mapping, Personas, User Journey Mapping, Service Blueprints, Pain-Point Analysis, Opportunity Mapping
 - UI Design: High-Fidelity UI Design, Responsive Interface Design, Visual Hierarchy, Typography, Layout Systems, Component Design, Design Systems, Style Guides
 - Accessibility & Inclusive Design: WCAG 2.2, Accessible Interaction Patterns, Contrast, Readability, Responsive Accessibility
 - Brand & Visual Systems: Branding, Visual Identity, Color Systems, Typography Systems, Brand Consistency
 - Tools: Figma, FigJam, Miro, Notion
-

PROJECTS

AI-Driven Digital Lease Governance Ecosystem for Sri Lanka - Final Year Research Project

UX Research | Product Research & Development

- Currently contributing to a final-year university research project exploring a digital ecosystem for improving the transparency and efficiency of state land lease management in Sri Lanka.
- Researching existing fragmented and manual lease-management processes, including information retrieval, document handling, approvals, policy compliance, and coordination between stakeholders.
- Examining the needs and workflows of government users, lease administrators, regulators, investors, and other stakeholders involved throughout the land-lease lifecycle.
- Supporting the definition of a unified digital experience combining lease information, decision support, document governance, workflow orchestration, and transparent process tracking.
- Translating research findings and system requirements into clearer user journeys, workflow considerations, and future product-design opportunities as the project progresses.

Handyman Services Marketplace

UX Research | UI Design

LINK

- Designed a two-sided home-services marketplace connecting customers with local professionals across service discovery, comparison, booking, communication, payment, and job completion.
 - Conducted qualitative UX research and competitor analysis, translating findings into personas, customer and provider journey maps, information architecture, and key user flows.
 - Identified core experience challenges around trust, reliability, pricing, job fit, and user control, and used them to guide product and interaction decisions.
 - Designed low- and high-fidelity experiences for customer and professional workflows, including search, profiles, requests, bookings, payments, messaging, availability, and reviews.
 - Developed reusable UI patterns and product features such as problem-first discovery, stronger trust signals, clearer availability, provider job context, and transparent scope-change approval.
-

EDUCATION

BSc (Hons) in Information Technology - Software Engineering

Sri Lanka Institute of Information Technology (SLIIT)

GPA - 3.74

May 2023 - May 2027 (Expected)

GCE Advanced Level Examination 2022/2023

Stream - Engineering Technology

Devi Balika Vidyalaya, Colombo 08
